Subject: Franklin - CTPS Route 140 Arterial Study - Concept Comments

Seth,

I reviewed the concepts we discussed with the staff from the Town of Franklin a couple of weeks ago and have the following comments:

Concepts 1 – 3 (General Comments)

- I suggest analyzing these concepts with a single through lane on Route 140 southbound at Beaver Street. Depending on the analysis results, the existing through-right lane could be changed to a right-turn lane or eliminated (and thus providing 5' shoulders through the Beaver Street intersection).
- Evaluate if there is a need to eliminate some of the existing raised median west of the Dunkin Donuts driveway to provide adequate storage length for the proposed left-turn lane into Dunkin Donuts on Route 140 southbound.
- As we discussed with the Town staff, these concepts should propose to reconfigure the residential driveway just west of Dunkin Donuts to connect with Old West Central Street, rather than Route 140.
- Based on the review of the crash reports and collision diagrams, are there recommendations to improve safety at the Route 140 / Franklin Village Drive / Old West Central Street intersection? As part of the capacity analysis, please see if queuing in the existing Route 140 left-turn lanes (both northbound and especially southbound) is problematic, and if lengthening the turn lane storage would be beneficial.

Concept 1 (TWLTL – 3-Lane Road Diet)

- Given the driveway spacing, I think this concept should have a continuous two-way left-turn lane from the Dunkin Donuts / Burger King driveways east to the left-turn lane for Panther Way.

Concept 2 (Flush Median Configuration w/ Left-Turn Lanes – 3-Lane Road Diet)

- I have several concerns with this concept for the section of Route 140 between Dunkin Donuts and Panther Way:
 - o To accommodate many of the business driveways on the corridor, the proposed left-turn lanes end up being quite short.
 - o Some businesses on the corridor will not have left-turn lanes for their customers (for example, Sherwin Williams).
 - o This concept seems to rely strongly on creating shared driveways at 3 Restaurant / Anne's Country Market and Franklin Square Plaza. This could make implementation of this concept more difficult, particularly if the property owners are not amenable to making the change.
- I suggest that this concept be modified to keep the left-turn lanes, but eliminate the flush median. Concerns with the flush median include:
 - o Police may ticket drivers who turn left across the flush median, which may make selling the concept to the business owners more difficult.
 - o The flush median creates a "negative" offset, which tends to create sight distance issues for left-turning vehicles.

Concept 3 (Raised Median – 2-Lane Road Diet)

- The proposed short sections of raised medians with left-turn lanes for many of the businesses are not desirable for the following reasons:
 - o The raised median creates a “negative” offset, which tends to create sight distance issues for left-turning vehicles.
 - o This concept provides access for many businesses, but restricts access for some. This may make selling the concept to the business owners more difficult.
 - o Snow and ice operations (plowing) are more difficult with short sections of raised median.
- If a raised median concept is retained, the concept should be modified to show a continuous median, with provisions for U-turns at the intersections of Franklin Village Drive / Old West Central Street and Beaver Street (and ideally at Panther Way if it could be accommodated).

During our meeting you mentioned that there were limited funds for analysis. If you find that the 3-lane cross section (1 left-turn lane and 1 through-right lane in each direction on Route 140) does not function well at the Panther Way intersection, please let me know. There may be 4-lane cross sections (2-lanes (1-through, 1 through-right) in one direction, 1 through-right in the other direction, plus a left-turn lane in each direction on Route 140) that might yield better operations, and could be tested in a preliminary way by analyzing only the Panther Way intersection.

Thanks for providing us the opportunity to comment, and feel free to call or email if you have any questions.

Joe

CTPS Franklin - Route 140 Study
MassDOT Highway Division District 3 Comments - 1/7/2015

- 1) We want to ensure that the presentation of the cross-section alternatives accurately state the benefits and disadvantages, without swaying readers too strongly against what may become a preferred alternative. Specifically, we feel that the disadvantages of the two-way left-turn lane (TWLTL) are overstated in the draft report. We recommend the following: (1) remove the graphic that shows a head-on collision in the TWLTL, (2) remove the statement on page 17 that Alt 1 "creates an overlap left turns...", all of the alternatives retain the existing conflict created by having closely offset driveways unless access modifications are included, (3) remove the statements that Alts 2 or 3 can reduce overlap left turn safety problems (we don't feel this issue is addressed), and (4) reword the statement on page 18 from "a major advantage of Alternative 2 is the elimination of head-on crashes that occur in TWLTL to state something like "Alternative 2 eliminates the potential for a head-on conflict, however with the left turn lanes, some driveways will not benefit from having a place to pull out of traffic while waiting for a gap and the left turn out of the driveways is not improved as much as it could be with the TWLTL."
- 2) We suggest presenting Alternative 3 as the 4-Lane Cross Section with the option of either left-turn lanes or a TWLTL. The analysis results would be similar and the impact on driveway access pros and cons between the left-turn lanes and TWLTL would be as presented in Alts 1 and 2.
- 3) For Alternative 3, please note that the reduced travel speed would likely occur on Route 140 southbound only. Also, note that the queuing on Route 140 southbound (the EB approach) would be similar to that seen in Alts 1 and 2. In addition, please state that Alternative 3 is not compliant with MassDOT's Healthy Transportation Policy.
- 4) For the Cross Section alternatives we suggest that the report mention that additional traffic simulation would be beneficial to better understand the duration and impacts associated with the queuing. As an example of something we would want to investigate further, in the 3 lane Synchro analysis, the WB approach has a 50th percentile queue of only 239 feet, but a 95th percentile queue of 1,045 feet.
- 5) At the beginning of the discussion of the West Central Street improvements, we suggest more clearly stating that for the purposes of this study potential alternatives that would widen the roadway between Dunkin Donuts and Beaver Street were not evaluated.
- 6) The West Central Street / Old West Central Street / Franklin Village Drive intersection is now a HSIP crash cluster. We suggest that one of the recommendations in the study be to conduct a road safety audit to discuss additional safety countermeasures for that location. In addition, the recommendation to increase the all-red clearance time should be more generally stated as adjusting the clearance intervals to be consistent with MassDOT's standard for determining clearance intervals.

- 7) At the locations where back plates are recommended, please add a note that a structural review will be required. At some locations (if the equipment is older) the existing mast arms or span wire may not be able to accommodate the additional wind load.
- 8) Please explain the benefit to traffic operations and/or safety with the recommended left turn lane on Beaver Street northbound. Also, note that this may impact the abutting properties.
- 9) The recommendation to coordinate the signals on East Central Street should mention that there is a cost to MassDOT and the Town to provide the equipment needed to keep the signal controllers in sync. Also, it may be necessary to replace one or more signal controllers if any cannot accommodate the suggested four time-of-day plans or cannot work with the other controllers.
- 10) On page 22, there is a sentence that states "MassDOT is responsible for implementing the short and long-term improvements." Improvements at the East Central Street / King Street / Chestnut Street intersection are the responsibility of the Town. Because of the mixed jurisdiction of the signals on East Central Street, we have shared responsibility for implementing and operating a coordinated signal system.

Route 140 Arterial Segments Study in Franklin Summary of District 3 Comments and CTPS Responses

Comment 1: We want to ensure that the presentation of the cross-section alternatives accurately state the benefits and disadvantages, without swaying readers too strongly against what may become a preferred alternative. Specifically, we feel that the disadvantages of the two-way left-turn lane (TWLTL) are overstated in the draft report. We recommend the following: (1) remove the graphic that shows a head-on collision in the TWLTL, (2) remove the statement on page 17 that Alt 1 "creates an overlap left turns...", all of the alternatives retain the existing conflict created by having closely offset driveways unless access modifications are included, (3) remove the statements that Alts 2 or 3 can reduce overlap left turn safety problems (we don't feel this issue is addressed), and (4) reword the statement on page 18 from "a major advantage of Alternative 2 is the elimination of head-on crashes that occur in TWLTL to state something like "Alternative 2 eliminates the potential for a head-on conflict, however with the left turn lanes, some driveways will not benefit from having a place to pull out of traffic while waiting for a gap and the left turn out of the driveways is not improved as much as it could be with the TWLTL."

Response: Pages 16 to 19—We have removed the graphic that shows head-on collision. In addition, we have removed the statements that Alternatives 2 or 3 can reduce overlap left turn safety problems. In addition we have added the statements that "Alternative 2 reduces the potential for a head-on conflict, however with the left turn lanes, some driveways will not benefit from having a place to pull out of traffic while waiting for a gap and the left turn out of the driveways is not improved as much as it could be with the TWLTL."

Comment 2: We suggest presenting Alternative 3 as the 4-Lane Cross Section with the option of either left-turn lanes or a TWLTL. The analysis results would be similar and the impact on driveway access pros and cons between the left-turn lanes and TWLTL would be as presented in Alts 1 and 2.

Response: Page 19—We have modified the Alternative 3 to include the option of a TWLTL.

Comment 3: For Alternative 3, please note that the reduced travel speed would likely occur on Route 140 southbound only. Also, note that the queuing on Route 140 southbound (the EB approach) would be similar to that seen in Alts 1 and 2. In addition, please state that Alternative 3 is not compliant with MassDOT's Healthy Transportation Policy.

Response: Page 20—We have indicated that Alternative 3 is not compliant with MassDOT Healthy Transportation Policy. Also, we have noted that the queuing on Route 140 EB approach would be similar to that seen in Alternatives 1 and 2.

Comment 4: For the Cross Section alternatives we suggest that the report mention that additional traffic simulation would be beneficial to better understand the duration and impacts associated with the queuing. As an example of something we would want to investigate further, in the 3 lane Synchro analysis, the WB approach has a 50th percentile queue of only 239 feet, but a 95th percentile queue of 1,045 feet.

Response: Pages 17 and 22—We have added text to explain that additional traffic simulation would be needed to better understand the duration and impacts associated with queuing for the alternatives.

Comment 5: At the beginning of the discussion of the West Central Street improvements, we suggest more clearly stating that for the purposes of this study, potential alternatives that would widen the roadway between Dunkin Donuts and Beaver Street were not evaluated.

Response: Page 15—We have added text at the beginning of subsection 6.1—West Central Street Improvements—that potential alternatives that would widen the roadway between Dunkin Donuts and Beaver Street were not evaluated in this study.

Comment 6: The West Central Street / Old West Central Street / Franklin Village Drive intersection is now a HSIP crash cluster. We suggest that one of the recommendations in the study be to conduct a road safety audit to discuss additional safety countermeasures for that location. In addition, the recommendation to increase the all-red clearance time should be more generally stated as adjusting the clearance intervals to be consistent with MassDOT's standard for determining clearance intervals.

Response: Page 16—We have added a recommendation to conduct a road safety audit for the intersection of West Central Street and Franklin Village Drive to discuss additional safety countermeasures for this intersection because it is an HSIP crash cluster. In addition, we have modified the recommendation to adjust clearance intervals to be consistent with MassDOT's standard.

Comment 7: At the locations where back plates are recommended, please add a note that a structural review will be required. At some locations (if the equipment is older) the existing mast arms or span wire may not be able to accommodate the additional wind load.

Response: Pages 16 and 21—At locations where signal backplates are recommended, we have noted that structural review of signal equipment be conducted to ensure that the

existing mast arms or span wires would be able to accommodate the additional wind loads.

Comment 8: Please explain the benefit to traffic operations and/or safety with the recommended left turn lane on Beaver Street northbound. Also, note that this may impact the abutting properties.

Response: Page 16—We have added text to explain the benefits of adding at left-turn lane to Beaver Street northbound—reducing delay at the approach and overall intersection delay. In addition, we have indicated that the improvement would impact on the abutting properties

Comment 9: The recommendation to coordinate the signals on East Central Street should mention that there is a cost to MassDOT and the Town to provide the equipment needed to keep the signal controllers in sync. Also, it may be necessary to replace one or more signal controllers if any cannot accommodate the suggested four time-of-day plans or cannot work with the other controllers.

Response: Page 23--We have added text to address these comments.

Comment 10: On page 22, there is a sentence that states "MassDOT is responsible for implementing the short and long-term improvements." Improvements at the East Central Street/King Street / Chestnut Street intersection are the responsibility of the Town. Because of the mixed jurisdiction of the signals on East Central Street, we have shared responsibility for implementing and operating a coordinated signal system.

Response: Page 23--We have added text to address these comments.

Re: **Route 140 Arterial Segments Study in Franklin**

Seth,

We've reviewed the draft study and have the following comments:

- Under the Existing Conditions Section:
 - West Central Street at Panther Way is equipped with emergency pre-emption for the Panther Way approach only (Police Station is located on Panther Way).
 - West Central Street at Beaver Street does not have emergency pre-emption.
 - East Central at Horace Mann Plaza does not have emergency pre-emption.
- We note that there is currently a private commercial development project undergoing the MEPA review process for the property at 300-340 East Central Street with a proposed traffic signal located at the intersection of Glen Meadow Rd which would have a significant impact to this section of East Central Street.
- You mentioned that MassDOT has requested some further analysis at the Panther Way intersection. We would be interested in seeing the results of that additional analysis.

Thank you for the opportunity to review the draft report.

Sincerely,

Michael Maglio, P.E.
Town Engineer

March 06, 2015

Mr. Michael Maglio
Town Engineer, Town of Franklin
Department of Public Works
257 Fisher Street
Franklin, Massachusetts 02038

Dear Mr. Maglio:

Re: Route 140 Arterial Segments Study in Franklin

Thank you for reviewing the draft study. MPO staff have reviewed comments from the Town of Franklin and communicated with MassDOT Highway Division District 3. The following are MPO staff response to the comments.

Comment 1:

Under the Existing Conditions Section:

- West Central Street at Panther Way is equipped with emergency preemption for the Panther Way approach only (Police Station is located on Panther Way).
- West Central Street at Beaver Street does not have emergency preemption.
- East Central Street at Horace Mann Plaza does not have emergency preemption.

Response to Comment 1:

We have addressed the comments and incorporated them in the study memorandum

Comment 2:

We note that there is currently a private commercial development project undergoing the MEPA review process for the property at 300-340 East Central Street with a proposed traffic signal located at the intersection of Glen Meadow Road which would have a significant impact to this section of East Central Street.

Response to Comment 2:

We agree that adding another traffic signal on East Central Street would have significant impact to delays and queuing on the corridor. These impacts cannot be evaluated as part of this study. We expect MassDOT to meet with the Town of Franklin and Project Developer to review and discuss in more detail prior to the Environmental Impact Report (EIR) phase.

Comment 3:

You mentioned that MassDOT has requested some further analysis at the Panther Way intersection. We would be interested in seeing the results of that additional analysis.

Response to Comment 3

We expect MassDOT Highway Division District 3, more likely in the next few years, to advance the design of the West Central Street corridor. During the study/design phase, they would include micro-simulation to examine the duration and the impact of queuing at the Panther Way intersection to enable selection of a preferred alternative. The additional analyses would be conducted by a consultant as part of a study/design effort, and the Town would have the opportunity to review the results.

Again, thank you for your participation in this study. I would send you the final study report when it is ready. Please feel free to call me or email if you have any question.

Yours truly,

Seth Asante,
Chief Transportation Planner

6	6' x 23' QUADRUPOLE BICYCLE LOOP WITH PAVEMENT MARKING & SIGN
6	6' x 23' QUADRUPOLE LOOP DETECTOR
1	PREEMPTION CONFIRMATION STROBE (CLEAR)
4	OPTICOM DETECTOR MODEL 711
2	2 CHANNEL PHASE SELECTOR AND RACK (700 SERIES)
6	PEDESTRIAN SIGNAL HEAD (L.E.D.) WITH PUSHBUTTON AND SIGN
2	SPARE BUS INTERFACE UNIT
12	LOAD SWITCHES (PER STANDARD SPECIFICATIONS- TABLE 2)
6	FLASH TRANSFER RELAYS (PER STANDARD SPECIFICATIONS- TABLE 2)
1	6'X12' QUADRUPOLE LOOP DETECTOR W/ BICYCLE PAVEMENT MARKING AND SIGN

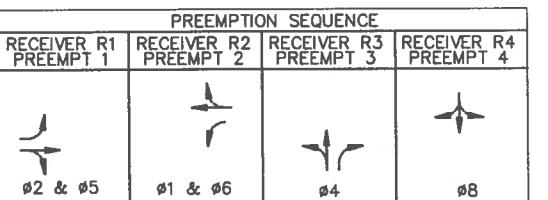

PLUS ALL MISCELLANEOUS EQUIPMENT AND MATERIAL NECESSARY TO PROVIDE A COMPLETE OPERATING TRAFFIC CONTROL SIGNAL SYSTEM.

530 FT	3" SCHEDULE 80 PVC CONDUIT
5	PULLBOX 12"x12"
2	DEEP WELL PULLBOX 24"x12"

PLAN NOTE: VEHICLE TURNING MOVEMENTS NOT SUPPORTED BY ARROW INDICATIONS, SHOWN AS DASHED ARROWS ON PLAN.

UNDER PEDESTRIAN ACTUATION ONLY

* HOLD ON INPUT PLUS SIX SECONDS MINIMUM

EMERGENCY VEHICLE PREEMPTION OPERATION:

- EMERGENCY VEHICLE PREEMPTION SHALL BE ACTUATED BY AN OPTICAL SIGNAL FROM AN OPTICAL Emitter MOUNTED ON AN EMERGENCY VEHICLE AND RECEIVED BY AN OPTICAL DETECTOR LOCATED AT THE INTERSECTION. A SEPARATE RECEIVING DETECTOR IS REQUIRED FOR EACH DETECTED APPROACH.

PREEMPTION SIGNALS FROM MULTIPLE APPROACHES SHALL BE SERVICED ON A FIRST DETECTED FIRST SERVED BASIS.

IN RESPONSE TO A PREEMPTION SIGNAL RECEIVED AT AN INTERSECTION BY AN OPTICAL DETECTOR, THE CONTROLLER SHALL TIME THE CLEARANCE INTERVALS OF THE ACTIVE PHASE (IF DIFFERENT THAN THAT TO BE SERVED) AND ADVANCE TO AND/OR HOLD IN EMERGENCY VEHICLE PREEMPTION PHASE UNTIL PREEMPTION SIGNAL CEASES. THE CONTROLLER SHALL THEN TIME CLEARANCES AND SIMILARLY SERVICE OTHER EMERGENCY VEHICLE PREEMPTION SEQUENCES IN THE ORDER RECEIVED (IF RECEIVED) OTHERWISE, RESUME NORMAL PREFERENTIAL PHASE SEQUENCE.

. PREEMPTION MINIMUM GREENS SHALL BE EIGHT SECONDS.

. NORMAL CLEARANCES SHALL BE PROVIDED ON PHASES THAT ARE TERMINATED BY PREEMPTION DEMAND.

. MAINLINE GREEN ($\theta 2$ & $\theta 6$) SHALL BE THE STARTING PHASE AFTER THE END OF PREEMPTION.

CONSTRUCTION NOTES:

- CONTROLLER PROGRAMMING SHALL BE ACCOMPLISHED BY QUALIFIED FACTORY REPRESENTATIVES.

Intersection Summary

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 101 (92%), Referenced to phase 2:EBT and 6:WBT, Start of Green

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.08

Intersection Signal Delay: 47.1

Intersection LOS: D

Intersection Capacity Utilization 73.7%

ICU Level of Service D

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

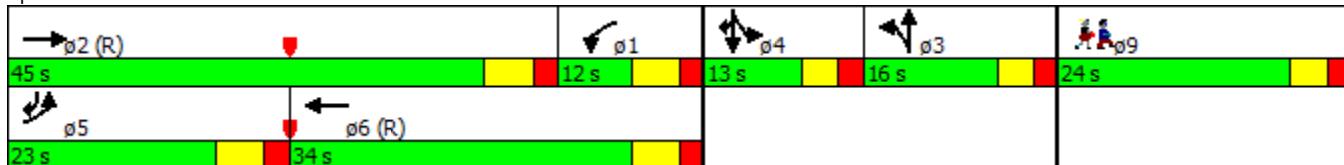

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 37 (31%), Referenced to phase 2:WBTL and 6:EBTL, Start of Green

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.79

Intersection Signal Delay: 20.1

Intersection LOS: C

Intersection Capacity Utilization 84.0%

ICU Level of Service E

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

Area Type: Other

Cycle Length: 90

Actuated Cycle Length: 90

Offset: 0 (0%), Referenced to phase 2:WBTL and 6:EBTL, Start of Green, Master Intersection

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.85

Intersection Signal Delay: 28.9

Intersection LOS: C

Intersection Capacity Utilization 89.0%

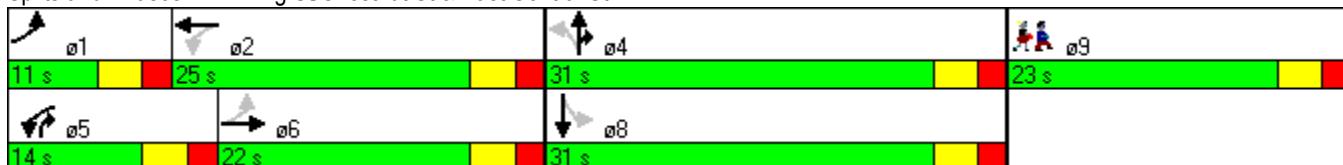

ICU Level of Service E

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:WBTL and 6:EBTL, Start of Green, Master Intersection

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.95

Intersection Signal Delay: 40.6

Intersection LOS: D

Intersection Capacity Utilization 94.4%

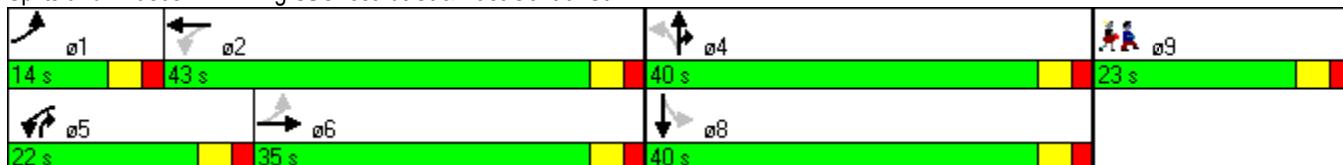

ICU Level of Service F

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: King St/Chestnut St & East Central St

Intersection Summary

Area Type: Other

Cycle Length: 95

Actuated Cycle Length: 95

Offset: 57 (60%), Referenced to phase 2:WBTL and 6:EBTL, Start of Green

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.86

Intersection Signal Delay: 26.9

Intersection LOS: C

Intersection Capacity Utilization 82.1%

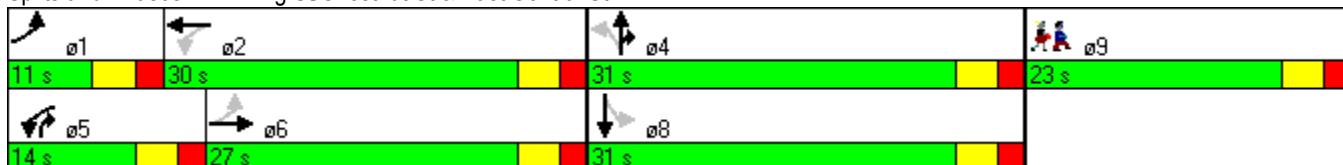

ICU Level of Service E

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: King St/Chestnut St & East Central St

East Central Street Corridor

2: CVS Dr/Horace Mann Plz & East Central St

Intersection Summary

Area Type: Other

Cycle Length: 95

Actuated Cycle Length: 95

Offset: 5 (5%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.67

Intersection Signal Delay: 13.4

Intersection LOS: B

Intersection Capacity Utilization 63.6%

ICU Level of Service B

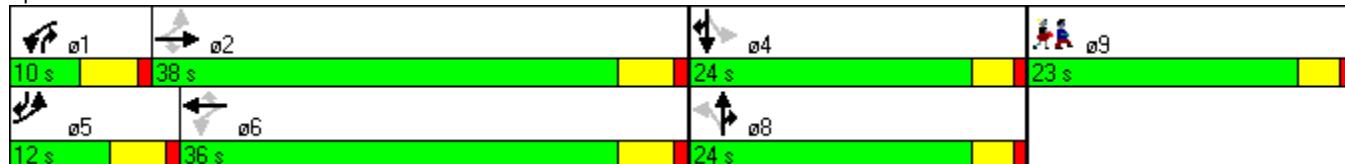

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: CVS Dr/Horace Mann Plz & East Central St

APPENDIX E

Overview of the Project Development Process

Overview of the Project Development Process

Transportation decision-making is complex and can be influenced by legislative mandates, environmental regulations, financial limitations, agency programmatic commitments, and partnering opportunities. Decision-makers and reviewing agencies, when consulted early and often throughout the project development process, can ensure that all participants understand the potential impact these factors can have on project implementation. Project development is the process that takes a transportation improvement from concept through construction.

The MassDOT Highway Division has developed a comprehensive project development process which is contained in Chapter 2 of the *MassDOT Highway Division's Project Development and Design Guide*. The eight-step process covers a range of activities extending from identification of a project need, through completion of a set of finished contract plans, to construction of the project. The sequence of decisions made through the project development process progressively narrows the project focus and, ultimately, leads to a project that addresses the identified needs. The descriptions provided below are focused on the process for a highway project, but the same basic process will need to be followed for non-highway projects as well.

1. Needs Identification

For each of the locations at which an improvement is to be implemented, MassDOT leads an effort to define the problem, establishes project goals and objectives, and defines the scope of the planning needed for implementation. To that end, it has to complete a Project Need Form (PNF), which states in general terms the deficiencies or needs related to the transportation facility or location. The PNF documents the problems and explains why corrective action is needed. For this study, the information defining the need for the project will be drawn primarily, perhaps exclusively, from the present report. Also, at this point in the process, MassDOT meets with potential participants, such as the Metropolitan Planning Organization (MPO) and community members, to allow for an informal review of the project.

The PNF is reviewed by the MassDOT Highway Division district office whose jurisdiction includes the location of the proposed project. MassDOT also sends the PNF to the MPO, for informational purposes. The outcome of this step determines whether the project requires further planning, whether it is already well supported by prior planning studies, and, therefore, whether it is ready to move forward into the design phase, or whether it should be dismissed from further consideration.

2. Planning

This phase will likely not be required for the implementation of the improvements proposed in this planning study, as this planning report should constitute the outcome of this step. However, in general, the purpose of this implementation step is for the project proponent to identify issues, impacts, and approvals that may need to be obtained, so that the subsequent design and permitting processes are understood.

The level of planning needed will vary widely, based on the complexity of the project. Typical tasks include: define the existing context, confirm project need, establish goals and objectives, initiate public outreach, define the project, collect data, develop and analyze alternatives, make recommendations, and provide documentation. Likely outcomes include consensus on the project definition to enable it to move forward into environmental documentation (if needed) and design, or a recommendation to delay the project or dismiss it from further consideration.

3. Project Initiation

At this point in the process, the proponent, MassDOT Highway Division, fills out a Project Initiation Form (PIF) for each improvement, which is reviewed by its Project Review Committee (PRC) and the MPO. The PRC is composed of the Chief Engineer, each District Highway Director, and representatives of the Project Management, Environmental, Planning, Right-of-Way, Traffic, and Bridge departments, and the MassDOT Federal Aid Program Office (FAPO). The PIF documents the project type and description, summarizes the project planning process, identifies likely funding and project management responsibility, and defines a plan for interagency and public participation. First the PRC reviews and evaluates the proposed project based on the MassDOT's statewide priorities and criteria. If the result is positive, MassDOT Highway Division moves the project forward to the design phase, and to programming review by the MPO. The PRC may provide a Project Management Plan to define roles and responsibilities for subsequent steps. The MPO review includes project evaluation based on the MPO's regional priorities and criteria. The MPO may assign project evaluation criteria score, a Transportation Improvement Program (TIP) year, a tentative project category, and a tentative funding category.

4. Environmental Permitting, Design, and Right-of-Way Process

This step has four distinct but closely integrated elements: public outreach, environmental documentation and permitting (if required), design, and right-of-way acquisition (if required). The outcome of this step is a fully designed and permitted project ready for construction. However, a project does not have to be fully designed in order for the MPO to program it in the TIP. The sections below provide more detailed information on the four elements of this step of the project development process.

Public Outreach

Continued public outreach in the design and environmental process is essential to maintain public support for the project and to seek meaningful input on the design elements. The public outreach is often in the form of required public hearings, but can also include less formal dialogues with those interested in and affected by a proposed project.

Environmental Documentation and Permitting

The project proponent, in coordination with the Environmental Services section of the MassDOT Highway Division, will be responsible for identifying and complying with all applicable federal, state, and local environmental laws and requirements. This includes determining the appropriate project category for both the Massachusetts Environmental Protection Act (MEPA) and the National Environmental Protection Act (NEPA). Environmental documentation and permitting is often completed in conjunction with the **Preliminary Design** phase described below.

Design

There are three major phases of design. The first is **Preliminary Design**, which is also referred to as the 25-percent submission. The major components of this phase include full survey of the project area, preparation of base plans, development of basic geometric layout, development of preliminary cost estimates, and submission of a functional design report. Preliminary Design, although not required to, is often completed in conjunction with the Environmental Documentation and Permitting. The next phase is **Final Design**, which is also referred to as the 75-percent and 100-percent submission. The major components of this phase include preparation of a subsurface exploratory plan (if required), coordination of utility relocations, development of traffic management plans through construction zones, development of final cost estimates, and refinement and finalization of the construction plans. Once Final Design is complete, a full set of **Plans, Specifications, and Estimates (PS&E)** is developed for the project.

Right-of-Way Acquisition

A separate set of Right-of-Way plans are required for any project that requires land acquisition or easements. The plans must identify the existing and proposed layout lines, easements, property lines, names of property owners, and the dimensions and areas of estimated takings and easements.

5. Programming (*Identification of Funding*)

Programming, which typically begins during the design phase, can actually occur at any time during the process, from planning to design. In this step, which is distinct from project initiation, the proponent requests that the MPO place the project in the region's Transportation Improvement Program (TIP). The proponent requesting the project's listing on the TIP can be the community or it can be one of the MPO member agencies (the Regional Planning Agency, MassDOT, and the Regional Transit Authority). The MPO then considers the project in terms of state and regional needs, evaluation criteria, and compliance with the regional Transportation Plan and decides whether to place it in the draft TIP for public review and then in the final TIP.

6. Procurement

Following project design and programming of a highway project, the MassDOT Highway Division publishes a request for proposals. It then reviews the bids and awards the contract to the qualified bidder with the lowest bid.

7. Construction

After a construction contract is awarded, MassDOT Highway Division and the contractor develop a public participation plan and a management plan for the construction process.

8. Project Assessment

The purpose of this step is to receive constituents' comments on the project development process and the project's design elements. MassDOT Highway Division can apply what is learned in this process to future projects.

Project Development Schematic Timetable

Description	Schedule Influence	Typical Duration
Step I: Problem/Need/Opportunity Identification The proponent completes a Project Need Form (PNF). This form is then reviewed by the MassDOT District office which provides guidance to the proponent on the subsequent steps of the process.	The Project Need Form has been developed so that it can be prepared quickly by the proponent, including any supporting data that is readily available. The District office shall return comments to the proponent within one month of PNF submission.	1 to 3 months
Step II: Planning Project planning can range from agreement that the problem should be addressed through a clear solution to a detailed analysis of alternatives and their impacts.	For some projects, no planning beyond preparation of the Project Need Form is required. Some projects require a planning study centered on specific project issues associated with the proposed solution or a narrow family of alternatives. More complex projects will likely require a detailed alternatives analysis.	Project Planning Report: 3 to 24+ months
Step III: Project Initiation The proponent prepares and submits a Project Initiation Form (PIF) and a Transportation Evaluation Criteria (TEC) form in this step. The PIF and TEC are informally reviewed by the Metropolitan Planning Organization (MPO) and MassDOT District office, and formally reviewed by the PRC.	The PIF includes refinement of the preliminary information contained in the PNF. Additional information summarizing the results of the planning process, such as the Project Planning Report, are included with the PIF and TEC. The schedule is determined by PRC staff review (dependent on project complexity) and meeting schedule.	1 to 4 months
Step IV: Design, Environmental, and Right of Way The proponent completes the project design. Concurrently, the proponent completes necessary environmental permitting analyses and files applications for permits. Any right of way needed for the project is identified and the acquisition process begins.	The schedule for this step is dependent upon the size of the project and the complexity of the design, permitting, and right-of-way issues. Design review by the MassDOT district and appropriate sections is completed in this step.	3 to 48+ months
Step V: Programming The MPO considers the project in terms of its regional priorities and determines whether or not to include the project in the draft Regional Transportation Improvement Program (TIP) which is then made available for public comment. The TIP includes a project description and funding source.	The schedule for this step is subject to each MPO's programming cycle and meeting schedule. It is also possible that the MPO will not include a project in its Draft TIP based on its review and approval procedures.	3 to 12+ months
Step VI: Procurement The project is advertised for construction and a contract awarded.	Administration of competing projects can influence the advertising schedule.	1 to 12 months
Step VII: Construction The construction process is initiated including public notification and any anticipated public involvement. Construction continues to project completion.	The duration for this step is entirely dependent upon project complexity and phasing.	3 to 60+ months
Step VIII: Project Assessment The construction period is complete and project elements and processes are evaluated on a voluntary basis.	The duration for this step is dependent upon the proponent's approach to this step and any follow-up required.	1 month
